To setup TwitterWithCassandra:-

1) Install Django – lattest version 1.8.3

2) Install Cassandra – yum install cassandra (for RedHat ent.),
   for debian may be apt-get install cassandra (need to check)

3) Install pip

4) install cython –> pip install cython (I guess this is not necessary)

5) install cassandra-driver –> pip install cassandra-driver

6) pip install django-cassandra-engine

7) git clone TwitterWithCassandra repo from github

8) cd TwitterWithCassandra

9) pip install -U -r requirements.txt

10) start cassandra in one terminal by typing cassandra
    (It should run. In case of any errors, google it ;)

11) Make sure you are in twitter directory, type:
    python manage.py sync_cassandra

12) then run the following command:
    python manage.py runserver

By default the server runs at port 8000. So open browser and goto 127.0.0.1:8000
Twitter should be running.
